HEATHER MILLER

Citizenship	USA	
Research Interests	Concurrent, distributed, eventually-consistent (edge computing), data-centric, and data-intensive (big data) programming, from the perspective of programming languages. I work on both theoretical ideas & implementations typically in/for the Scala programming language. My goal is to reduce the burden of building distributed systems.

Book	Distributed Programming Heather Miller, Nat Dempkowski, James Larisch, Christopher Meiklejohn, and Philipp Haller A textbook about the building blocks we use to build distributed systems. These range from the small, RPC, futures, actors, to the large; systems built up of these components like MapReduce and Spark. We explore issues and concerns central to distributed systems like consistency, availability, and fault tolerance, from the lens of the programming models and frameworks that the programmer uses to build these systems. <i>Source (draft)</i>	MIT Press 2018/2019
